System Architecture

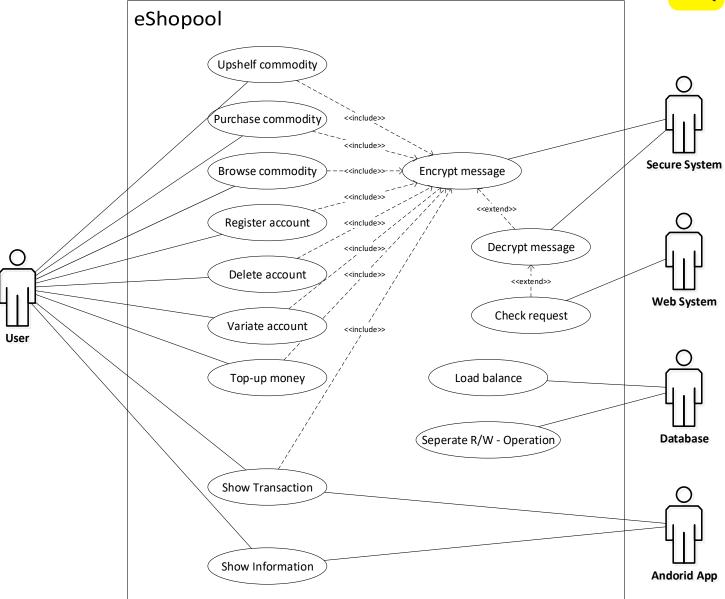

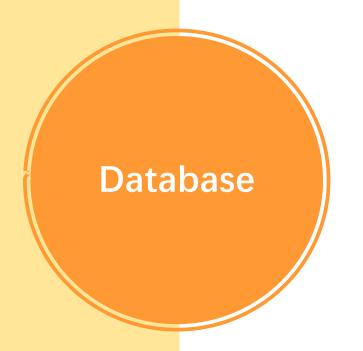

Tasks Description

Eshopool Database Commodity [Commodity] c ID [Commodity ID] c_name [Commodity name] c_price [Commodity price] c_num [Commodity number] category_ID [Commodity category ID] User [User] FK1 s ID [Seller ID] u ID [User ID] c_desc [Commodity description] Seller ID -c_img_id [Commodity image ID] u_phone [User phone number] c_lock [R/W lock] u_password [User password] u_public_key [User public key] u_private_key [User private key] **Commodity ID** u_balance [User balance] u address [User address] Trade_info [Trade_info] t ID [Transaction ID] Seller ID FK1 b_ ID [Buyer ID] FK2 s_ID [Seller ID] FK3 c_ID [Commodity ID] **Buyer ID** t_num [Commodity quantity] t_price [Total price] t_date [Transcation time]

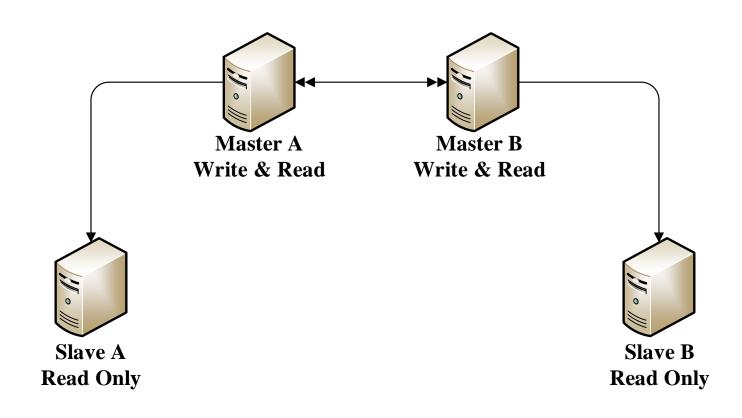

Multi-Master-Slave Architecture

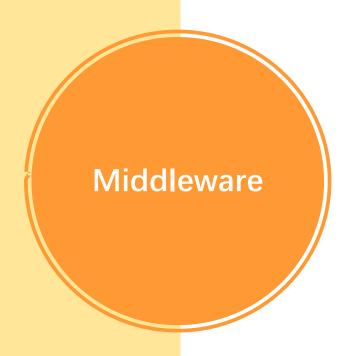

Database Cluster Architecture

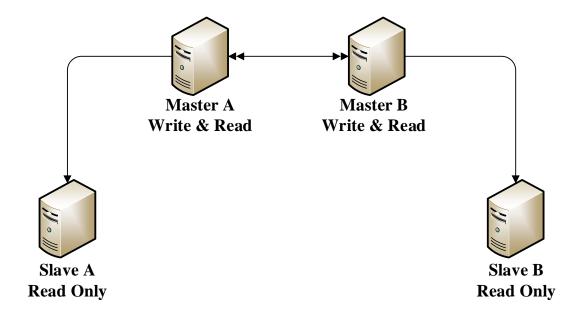

Load Balance

-Weighted Round Robin

R/W Splitting

-Master: Read & Write

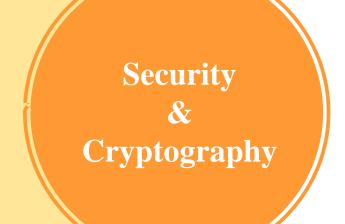

-Slave: Read Only

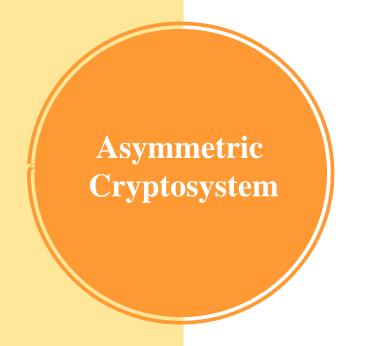

- 1. RSA
- **2. AES**

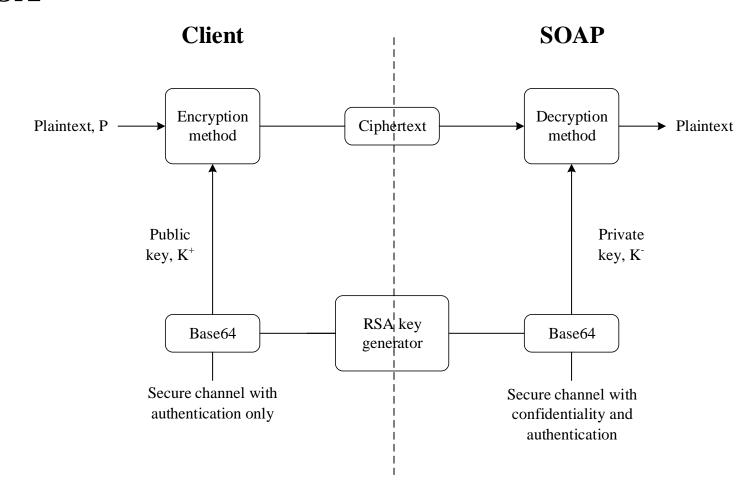

RSA

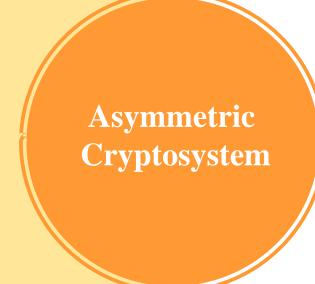

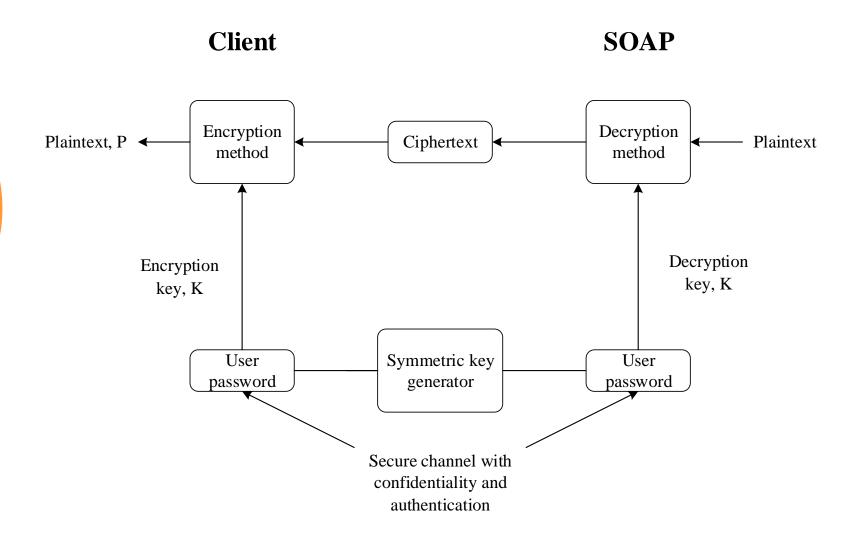

AES

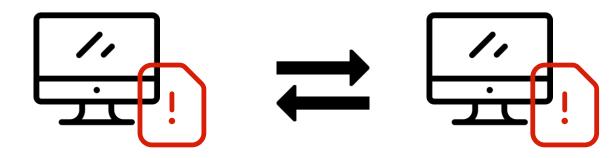

Two-phase Lock

To ensure the atomic operation, we added the Two-phase lock to each item.

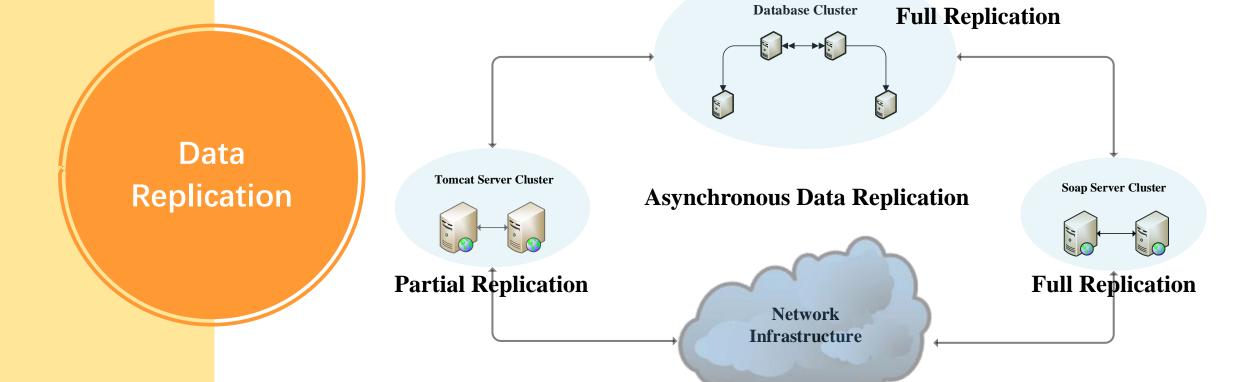

Exception Log Synchronization

Two soap servers can synchronize each other according exception log.

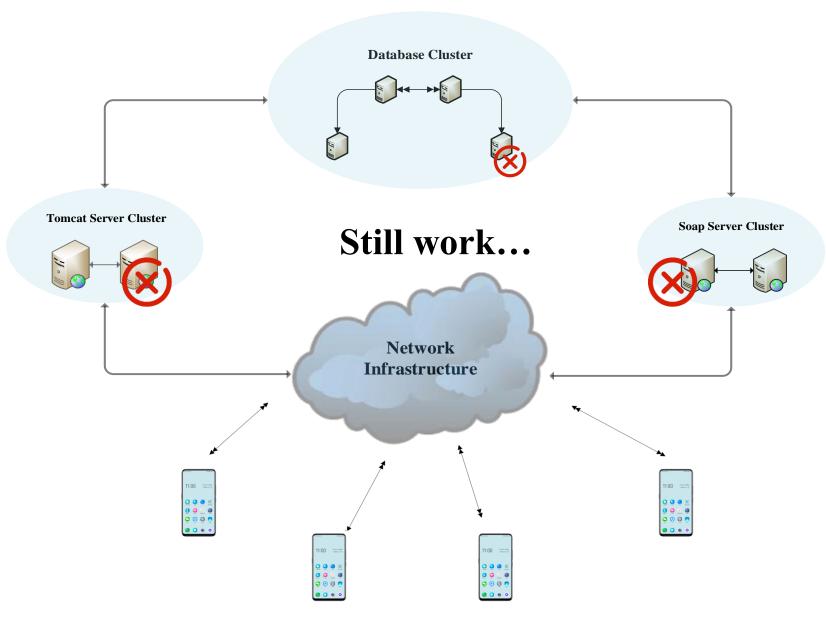

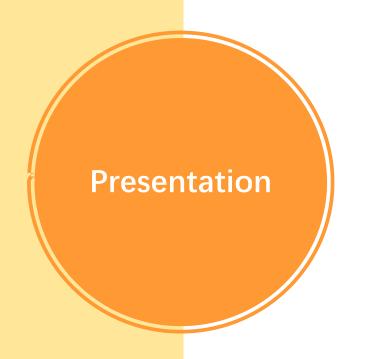

Fault-Tolerance & Transparency

Thank you for listening! Group 10
